The elevation of the derrick floor above sea level is 2250 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

Moved in pulling unit, killed well, & pulled 2" tubing. Re-run 7" tubing with 322' of 1-5/8" Flush Joint Drill Pipe on bottom & tubing stopped at 3001'. Mixed mud & spotted cement plug from 3001' to 3504' with 12 sacks of cement. Pulled tubing & run McAllough Magna-Tector Survey and found casing stuck at 1505' and free at 1500'. Went in hole with Jet casing cutter and cutter stopped at 2650'. Pulled up & shot casing off at 2600'. Attempted to pull casing with maximum strain of 70,000 lbs, but was unsuccessful. Spotted cement plug from 2600' to 2908' with 10 sacks of cement. Shot 5-1/2" casing off at 1480' and pulled casing out of hole. Spotted cement plugs from 1474' to 1440' with 10 sacks of cement, from 1175' to 1123' (bottom of 3-5/8" casing) with 15 sacks of cement, from 866' to 776' with 30 sacks of cement, and from 27' to surface with 10 sacks of cement. Set 4" marker extending 5' above ground level. Well plugged and abandoned and all work was completed on 5-20-57. Circulated mud to surface through 2" tubing prior to spotting each cement plug.

Confirming telephone conversations with Mr. John A. Frost, U.S.G.S., Artesia, N.M. on 5-14-57 and 5-20-57.
