DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to treat the subject well with 20,000 gallons sandfrac oil and 20,000# sand through 3" tubing with packer set at approximately 3800 feet.

Present production is approximately 2 bbls oil, no water, per day flowing through 3/16" choke.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
