## DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We pain to re-enter our Johns B 3 abandoned Red Sand test well to test the Grayburg or Maljamar pay zones to a depth of 4300 feet. We plan to tie 8-5/8" casing back into the 8-5/8" casing left cemented in the hole at 264' then clean out the 8" hole to old total depth of 3585' and drill new 8" hole to approximately 4300 feet. Plan to cement new 5-1/2", 14 and 15.5 lb casing through new zones, jet perforate the zones and treat with sand frac.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
