13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

CIBPC 4121
Conoco requests permission to cap the cement retainer with 35' of Class "C" cement and to permanently abandon the current completion. Some pressure was recently found on the casing and this work should eliminate it. Since the zone below the plug will not be re-entered, Conoco seeks your approval to permanently abandon the current completion by doing this work. If any additional work is necessary to permanently abandon the San Andres/Grayburg completion, Conoco prefers to do this work now versus later and would like to be notified as to what other work must be done. A valid MIT was run on 8/26/97 and should be on file with your office.

Following this work, another MIT will be run to verify the well has mechanical integrity. This well is believed to have recompletion potential in the Queens and Yates. We will be evaluating this recompletion over the next 12-18 months.
