The elevation of the derrick floor above sea level is 3937 ft.

### DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill this well through the Red Sand Section to approximately 3500'. We plan to set 8-5/8" casing at approximately 100' and cement casing to surface. We also plan to set 5-1/2" casing at approximately 3500' and will also cement this casing to surface. Well will be drilled with rotary tools.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
