Re: Plugging Cities Service Angle St. #1-A
Section 32-16S-33E

Gentlemen:

Mr. M. L. Armstrong, Oil and Gas Inspector, has inspected the location for your plugged and abandoned Cities Service Angle State #1 in Unit A of Section 32-16-33 and has found that there was still some work to be done on this location before your final plugging report can be approved. For instance, the well marker, which does not have the location stencilled on it, has not been set up, the dead men loops have not been out, nor has the cellar been filled.

Please inform this office when this work has been completed, so that another inspection may be made and the files cleared on this location.

Yours very truly,

OIL CONSERVATION COMMISSION
