**CASING PROGRAM**

We have set the following casing:  
339.17' of 13-3/8" csg. set at 358.77', cmtd. with 350 sacks cement.  
4523.75' of 9-5/8" csg. set at 4542.00', cmtd. with 2700 sacks cement.  
13668' of 7" csg. set at 13682' and cmtd. with 1325 sacks cmt.

If productive zones encountered below original proposed depth, we will probably set a 4" OD liner.

Well will be drilled to total depth of approximately 15,500' to test formation of Pre-Permian Age. This amended form is to correct proposed total depth from 14500 to 15500.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
