## FULL DETAILS OF PROPOSED PLAN OF WORK

FOLLOW INSTRUCTIONS IN THE RULES AND REGULATIONS OF THE COMMISSION

We ran 1791' of 8 5/8" OD, 28# casing on November 3, and cemented same with 50 sacks of cement, by Halliburton. We propose to allow the cement to set for at least 72 hours and then after bailing the hole to bottom we will drill the cement with cable-tools and test for water shut-off.

The bottom 606' of this casing string is new condition and the balance is new casing.

The present total depth of this well is 1791'. The top of the Rustler anhydrite was encountered at 1753'. All measurements are from the derrick floor and were checked by Halliburton.
