Re: KWCU SWD #8-P, 19-16-34

Sir:

In answer to your letter of 1/9/87, the subject well has been repaired and returned to injection as of 1/10/87. The workover is summarized as follows:

- 1) Four joints of bad tubing were located and replaced.
- 2) A bit and scraper run was made.
- 3) A junked packer was retrieved.
- 4) The hole was circulated clean.
- 5) Formation was acidized with 1500 gal 15% NEFE HCl acid.
- 6) Well was returned to injection.

Ralph Adams will contact your office by phone and schedule a bradenhead test of the subject well for the week of 1/19/87 if this is convenient.

Sincerely,

Scott Royal
Project Engineer
