- VIII. Depth to base of the Ogallala fresh water aquifer in area is 350'±. No known fresh water occurs below this depth in the immediate area.
- IX. No stimulation program is planned.
- X. Well logs are on file with the Oil Conservation Division.
- XI. Attached are water analyses from wells within the area of review.
- XII. We have examined available geological and engineering data and find no evidence of open faults or other hydrological connection between the proposed disposal zone and any underground source of drinking water.
- XIII. We are contacting the offset operators within the area of review via mail (return receipt requested) and have furnished them with a copy of this application. We will furnish copies of the return receipts to the Commission when we receive them.
