Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The *Agrobacterium* strains were incubated with the plant explants for 24 h. The explants were then cultured on the selective medium. The number of explants transformed was counted. The results are the mean  $\pm$  SD of three independent experiments. \* indicates a significant difference ( $p < 0.05$ ) between the control and the treated explants.

1. The first step is to identify the problem. In this case, the problem is that the company is not meeting its sales targets. This could be due to a variety of factors, such as a lack of marketing budget, poor timing of the product launch, or a change in consumer behavior.
