Above leases have same basic royalty to State of New Mexico and since wells are starting to show small amount of water it will be necessary to install treating systems at each battery. It is proposed to consolidate all wells into one central tank battery to be located on State "Q" lease S/2 SE/4 of Section 36-163-36E, and install one central treating system and thereby eliminate separate treating systems and permit salvage of vital material for use in other development work. All wells producing top allowable and manifolds for individual testing of production from each well will be installed.
