Describe the proposed program. If this application is to DEEPEN or PLUG BACK give the data on the present productive zone and proposed new productive zone. Describe the blowout prevention program, if any. Use additional sheets if necessary.

The well was producing from the Denton Devonian (12086-12237). On 10/13/87 a CIBP was set at 12,000'. We propose to drill out the CIBP at 12,000' and test the existing open interval (12086-12237). If not productive, we propose to squeeze those perms under a retainer. We then propose to perforate, acid, and test from 12051' - 12073'.
