The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We intend to drill a well at the above location with rotary tools to a depth of approximately 9500 feet into the Wolfcamp formation. All casing strings will be cemented in accordance with approved methods of the U.S. Geological Survey and any other special requirements will be complied with.

We plan to set 13 3/8" O.D. casing at 350 feet and circulate cement, 9 5/8" O.D. casing at 4700 feet with 3000 sac cement and 7" O.D. casing at 9500 feet with 675 sac cement.

Approval to produce this well upon completion is also requested.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
