FULL DETAILS OF PROPOSED PLAN OF WORK
(FOLLOW INSTRUCTIONS IN THE RULES AND REGULATIONS)

Above well was completed in January, 1953, as a small producer through casing perforations 10,536-10,968'. Production has now declined to such a point that it is not feasible to continue operating the well from this zone.

It is proposed to set a Model "K" Baker cast iron bridging plug at approximately 6300' and then run a 30-ft. hydromite plug on top of bridging plug. The 5 1/2" OD casing will then be perforated in the Glorieta section approximately 6110-6255 and an attempt will be made to develop commercial production the the Glorieta.
