

STATE N K "A" #1

Proposed Plan of Work

This well was formerly drilled as the North Knowles Unit #1 to a total depth of 13,368' in 1956 and abandoned as a dry hole. Casing left in well as follows:

13-3/8" set at 341'
8-5/8" from 1000' to 4967'
5-1/2" from 11275' to 13085'

Plan to re-enter hole, splice onto 8-5/8" OD casing at 1000' and cement with 100 ex cement. Drill out plugs and clean out open hole from 4967' to 11275'. Run a string of 3-1/2" tubing and test the Pennsylvanian zone for possible production.
