DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Subsequent to frac operations, the surface and production casing pressures were equal. Investigation revealed holes in 4 1/2" casing at 1402 and 1469. Holes at 1402 and 1469 were squeezed with 450 sacks in 3 stages. Cement was circulated. WOC 24 hours. Cement was drilled out but would not hold pressure at 1600#. Holes at 1402 and 1469 were squeezed with 200 sacks. WOC 36 hours. Retainer and cement drilled out. Tested casing with 1600# for 30 minutes. Tested Ok.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
