The elevation of the derrick floor above sea level is 3990 ft.

### DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

Test pumping equipment was installed in the subject well on 1-1-61 in an effort to recover lead oil used in the original completion attempt. It is believed that a formation block, existing at that time, gradually dissolved enabling the well to be produced. All lead oil was recovered and on 3-17-61 the well was potentialled with test pumping equipment. It produced 4 bbls of 36 degree gravity oil, no water in 24 hours with gas TSTL.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
