DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

On July 10, 1940 we cemented 5 1/2" casing in this well at 5337' with 600 sacks of cement. A temperature survey ran 12 hours after cementing showed the top of cement behind pipe at 1934'. On July 13 the cement in the pipe was drilled out to 5337', and a surface pressure of 1000 PSI applied for 30 minutes without any drop in pressure.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
