Re: MCA Unit Bty 1 #331-D, Section 20, T17S, R32E

Gentlemen:

We received a Sundry Notice that the above referenced well was shut on June 5, 1987, due to a packer leak.

On September 2, 1987, we received a notice that the well has been placed back on injection, but there is no record of the repairs made, where the packer was set, or a chart showing a satisfactory pressure test after the packer was reset.

In order to bring our records up to date, we request that the above information be sent to us.

In the future, please notify this office 24 hours in advance of repairs to any well in a waterflood project or to a salt water disposal well in order that we may witness the operation.

Very truly yours

OIL CONSERVATION DIVISION
