The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is our intention to drill a well with rotary tools at the above location to a total depth of approximately 14,000'. All casing points will be cemented in accordance with approved methods of the U. S. Geological Survey and any other special requirements will be complied with.

It is planned to use the following casing pattern: 13 3/8" casing to be set at approximately 400' and cemented with 350 sacks, cement to be circulated. 9 5/8" casing to be set at approximately 4700' and cemented with 2300 sacks, cement to return to surface casing. 7" casing to be set at 14,000' and cemented with 500 cubic feet of Trinity Inferno with 100 sacks neat around shoe.

Approval to produce this well upon completion is also requested.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
