NOTICE OF INTENTION TO ABANDON WELL.....			

(INDICATE ABOVE BY CHECK MARK NATURE OF REPORT, NOTICE, OR OTHER DATA)

Artesia, New Mexico, July 13, 1950

Wm. Mitchell B
Well No. 23-P is located 1980 ft. from SW line and 2193 ft. from E line of sec. 20
NW 1/4 Sec. 20 17S 32E NMPM
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Wildcat Lea New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well will be drilled with rotary tools to a depth sufficient to test the Paddock zone, estimated at a depth of 5300'.

Approximately 60' of 13-5/8" OD Arnico casing will be set as a conductor string and cemented to the surface.

An intermediate string of 8-5/8" OD casing will be set through the salt to approximately 2500'. This will be cemented in two stages, using enough cement on the first stage to come above the Base of Salt, estimated at 185 sacks. The second stage tool will be placed at the top of salt and enough cement used to come up 300' above salt, estimated as 115 sacks, based on caliper surveys.

In the event that commercial production is found in the Paddock zone, 5-1/2" OD Casing will be cemented with enough cement to come up 500' above the Maljamar producing zone.
