The elevation of the derrick floor above sea level is ft.

DETAILS OF WORK

(State names of and expected depths to objective sands, show sizes, weights, and lengths of proposed casings; indicate mud logging jobs, cementing points, and all other important proposed work)

On 4-10 we drilled to a total depth of 3992'. 4-11 the well was plugged back from 3992' to 3921'. A 3 1/2" shell using 90 quarts of nitro was run from 3875' to 3921' a total of 46'. 100' of gravel was used for a tamp. Well was then cleaned out to 3828'. On 4-13 a 4" shell, using 50 quarts of nitro, was run from 3808' to 3828'—A total of 20'. A 100' gravel tamp was used on this shot. Well was then cleaned out to a total depth of 3992' on 4-18. Well was bailed and swabbed for 24 hours. On 4-19, 3986' of 2" upset tubing was run with perforations set at 3956'.

(Above work confirmed in telephone conversation between Frank Stahl and M. Rowley - 4-11-49)

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
