Well No. I.P. 928 is located 2613 ft. from S line and 140 ft. from E line of sec. 30

30 (14 Sec. and Sec. No.) 37.5 (Twp.) 22 E (Range) 24N (Meridian)
Maljamar (Field) Los (County or Subdivision) New Mexico (State or Territory)

The elevation of the derrick floor above sea level is 3512 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

On June 22, 1950, after total depth of 3795' had been drilled, the well was plugged back to 3860'. Well was then shot from 3710' - 3790' using a 3" shell and 120 Qts. of nitroglycerine and from 3790' - 3860' with 3 1/2" shell and 140 Qts. Well was then cleaned out to total depth of 3981'. We then ran 3875' of 2" upset tubing. Well has not been tested for production since it is to be used for gas injection.

(Confirmed in telephone conversation with the Artesia office and Marshall Rowley - 6-21-50.)

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
