The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well is to be used as an injection well for pressure maintenance and will not be used for the production of oil and gas.

We propose to drill this well to an approximate depth of 3950'. Casing program to be as follows: approximately 30' of 10-3/4" casing for a conductor string, cemented to surface; 950' of 8-5/8" casing cemented with 50 sacks on top of the salt; 3700' of 7" casing which should put us within 50' of the top of the 6th zone. This string of casing will be cemented with 300 sacks preceded by enough mud to fill the hole to the surface. U. S. GEOLOGICAL SURVEY

RECEIVED

APR 20 1950

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
