The elevation of the derrick floor above sea level is **3909** ft.**DETAILS OF WORK**

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

2-3-63 Parted 4 1/2" OD casing at 7782' with a squib shot. Pulled casing and filled hole with 10#, 40 Vis. mud, spotted cement plugs as follows: 25 sacks 7850-7723'; 25 sacks 6150-6050'; 25 sacks 4100-4200'; 15 sacks 0-50'. The 13-3/8" x 8-5/8" bradenhead was left on well.

A 1/4" steel plate was welded on top of the 8-5/8" OD casing with a 4 1/2" OD pipe regulation marker welded on the plate.

2-6-63 Well plugged and abandoned

2-8-63 Cellar was filled and mud pits cut. Will be completed when mud dries sufficiently (approximately three weeks) near 3-1-63.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
