(State or Territory)

The elevation of the derrick floor above sea level is \_\_\_\_\_ ft.

## DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is our intention to drill a well at the above location to an approximate depth of 4,125' to complete as a water injection well in the Grayburg-San Andres. This well is to be drilled in conjunction with the MCA Unit Waterflood. All casing points will be cemented in accordance with approved methods of the USGS and any special requirements will be complied with. It is planned to use the following casing pattern: 11" hole, 8 5/8" casing to be set at 850' and cemented w/300 sacks cement. Cement is to circulate. 7 7/8" hole, 5 1/2" casing, to be set at 4125' and cemented w/450 sacks cement. Cement is to return to 1800'.

This location authorized by NMOCC Order No. R-1075 & approved proposed plan of operation submitted with supplement No. 5. Permission is requested to use this well as a water injection well upon completion.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
