

NEW MEXICO OIL CONSERVATION COMMISSION  
SOUTHEAST NEW MEXICO PACKER LEAKAGE TEST

Operator Continental Oil Company			Lease Baish A			Well No. 12	
Location of Well	Unit A	Sec 21	Twp 17	Rge 32	County Lea		
Name of Reservoir or Pool			Type of Prod (Oil or Gas)	Method of Prod Flow, Art Lift	Prod. Medium (Tbg or Csg)	Choke Size	
Upper Compl	Maljamar Abo		Oil	Flow	Tubing	20/64	
Lower Compl	Baish Wolfcamp		Oil	Flow	Tubing	20/64	

FLOW TEST NO. 1

Both zones shut-in at (hour, date): 8:15 A.M. 4-17-67

	Upper Completion	Lower Completion
Well opened at (hour, date): 8:30 A.M. 4-18-67		
Indicate by ( X ) the zone producing.....		X
Pressure at beginning of test.....	830	375
Stabilized? (Yes or No).....	No	No
Maximum pressure during test.....	1050	125
Minimum pressure during test.....	830	25
Pressure at conclusion of test.....	1040	50
Pressure change during test (Maximum minus Minimum).....	220	100
Was pressure change an increase or a decrease?.....	Increase	Decrease
Well closed at (hour, date): 8:30 A.M. 4-19-67	Total Time On Production 24 hrs.	
Oil Production	Gas Production	
During Test: 93 bbls; Grav. 41.5 ; During Test 171.5 MCF; GOR 1844		
Remarks		

FLOW TEST NO. 2

Well opened at (hour, date): 8:15 A.M. 4-20-67	Upper Completion	Lower Completion
Indicate by ( X ) the zone producing.....	X	
Pressure at beginning of test.....	1125	350
Stabilized? (Yes or No).....	No	No
Maximum pressure during test.....	1125	470
Minimum pressure during test.....	200	350
Pressure at conclusion of test.....	200	470
Pressure change during test (Maximum minus Minimum).....	925	120
Was pressure change an increase or a decrease?.....	Decrease	Increase
Well closed at (hour, date) 8:15 A.M. 4-21-67	Total time on Production 24 hrs.	
Oil Production	Gas Production	
During Test: 92 bbls; Grav. 42.2 ; During Test 423 MCF; GOR 4597		
Remarks		

I hereby certify that the information herein contained is true and complete to the best of my knowledge.

## TE INSTRUCTIONS

2. At least 72 hours prior to the commencement of any packer leakage test, the operator shall notify the Commission in writing of the exact time the test is to be commenced. Offset operators shall also be so notified.

3. The packer leakage test shall commence when both zones of the dual completion are shut-in for pressure stabilization. Both zones shall remain shut-in until the well-head pressure in each has stabilized and for a minimum of two hours thereafter, provided however, that they need not remain shut-in more than 24 hours.

4. For Flow Test No. 1, one zone of the dual completion shall be produced at the normal rate of production while the other zone remains shut-in. Such test shall be continued until the flowing wellhead pressure has become stabilized and for a minimum of two hours thereafter, provided however, that the flow test need not continue for more than 24 hours.

5. Following completion of Flow Test No. 1, the well shall again be shut-in, in accordance with paragraph 3 above.

6. Flow Test No. 2 shall be conducted even though no leak was indicated during Flow Test No. 1. Procedure for Flow Test No. 2 is to be the same as for Flow Test No. 1 except that the previously produced zone shall remain shut-in while the previously shut-in zone is produced.

7. All pressures, throughout the entire test, shall be continuously measured and recorded with recording pressure gauges. the accuracy of which must be checked with a deadweight tester at least twice, once at the beginning and once at the end, of each flow test.

8 The results of the above-described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the appropriate District Office of the New Mexico Oil Conservation Commission on Southeast New Mexico Packer Leakage Test Form Revised 11-1-58, together with the original pressure recording gauge charts with all the deadweight pressures which were taken indicated thereon. In lieu of filing the aforesaid charts, the operator may construct a pressure versus time curve for each zone of each test, indicating thereon all pressure changes which may be reflected by the gauge charts as well as all deadweight pressure readings which were taken. If the pressure curve is submitted, the original chart must be permanently filed in the operator's office. Form C-116 shall also accompany the Packer Leakage Test Form when the test period coincides with a gas-oil ratio test period.
