1. The first step is to identify the problem. In this case, the problem is that the system is not working properly.

Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The *Agrobacterium* strains were cultured in the YEA medium for 24 h and then adjusted to the concentration of 1×10^8 cells/ml. The *Agrobacterium* strains were then cultured in the YEA medium with the concentration of 10, 100, 1000, 10000, 100000, and 1000000 cells/ml. The transformation efficiency was determined by the number of transformants per 100 cells. The results are shown in the bar chart. The error bars represent the standard deviation. The data were analyzed by the one-way ANOVA test. The results are shown in the table.
