		in Morrow.	

Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work) SEE RULE 1103.

Packer setting at 12,290'.

Tests indicate water coming from zones (11,936-46) (12,244-50). Set Packer at 12,290' to shut off water from upper zone and complete in Morrow zone 12,326-12,947'. Perforated at the following intervals: (12,326-32') (12,810-28') 12,903-09') & (12,937-47').

We are attempting to recover water from Morrow zone to see if we could make a commercial well. We are using a Compressor from HRM Resources, also to get into sales lines to avoid venting to atmosphere. We suspect damage from clay swelling from incoming water before separating zones with Packer.

We assume we could continue to sell gas from this well as it has been completed as a Morrow producer. (See attached C-105).

I hereby certify that the information above is true and complete to the best of my knowledge and belief.
