Maljamar Los New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 6045.2 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)
Application is hereby made to plug and abandon this well. We propose to fill hole with cement from Total Depth of 5142' back to approximately 5130' with 12 sacks of cement and spot a cement plug from approximately 4125' to approximately 3745' with 175 sacks of cement and spot another plug from approximately 3457' to approximately 3411' with 12 sacks of cement. We will then fill hole to surface of ground with mud and space between cement plugs will also be filled with mud. All casing will be left in the hole. A marker will be welded on a surge nipple which will be secured in the top of the 7" casing.

Confirming telephone conversation with Mr. Marshall of U. S. G. S., New Mexico, New Mexico on 11-4-30.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
