(Range)

TCN
(Meridian)

Maljamar
(Field)

Lee
(County or Subdivision)

New Mexico
(State or Territory)

The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill this well to approx. 4300 ft., at which point the Maljamar pay is expected. A combination rotary-cable tool rig will set 1300 ft. of 8 5/8" surface casing, rotary drilling to that depth. 4000 ft. of 7" casing will be set for oil string, the hole to be drilled with cable tools from 1300 ft. to 4300 ft.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
