Well No. **3** is located **660** ft. from **N** line and **1980** ft. from **E** line of sec. **34**

SE/4 SW/4	34	17S	33E	N 1/4 M
(1/4 Sec. and Sec. No.)	(Twp.)	(Range)	(Meridian)	
Maljamar	Lee	New Mexico		
(Field)	(County or Subdivision)	(State or Territory)		

The elevation of the derrick floor above sea level is **4053** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

On 7-21-57 we cleaned this well out to bottom and tested the section from 5292 to 5319 for no production. Plugged back to 4950, set a formation packer at 4850 and acidized the section 4860-4900 in the open hole and got no response. Plugged back from 4820 to the pipe at 4811 and up into the pipe to 4794. On 7-30-57 Lane Wells perforated the casing from 4667 to 4679 with 48 bullets and from 4713-4723 with 10 bullets and from 4725-4727 with 3 bullets. On 8-1-57 we acidized the well with 250 gal. of mud acid and on 8-2-57 we fractured it using 800# edemite, 1000# sand and 1000 gal. lease crude. After the load was recovered, the well produced 60 bbls. per day swabbing. It originally was non productive.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
