DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

In addition to the plug-back job reported on April 18, 1938, this well has been plugged back from 5112' to 4345' with rock and from 4345' to 4322' with sand, gravel, and lead wool, thus plugging off a non-productive section and possible water. We now desire to shoot the saturated sandy lime section from 4258' to 4315' with 220 quarts of nitroglycerin in an effort to make a commercial producer of this well.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
