DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill this well to an approximate total depth of 5300' unless commercial production is obtained at a lesser depth. We will run approximately 1600' of 8 5/8" casing on top of the salt section and cement with 80 sac. A 7" production string will be run if production is found.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
