(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 3935 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to recomplete this Queen sand completion in the Lower Yates section. We will set a 5 1/2" Plug at approximately 4150 and perforate this Lower Yates section from 3506 to 3516.

We plan to sand oil fracture these perforations with approximately 20,000 gal. of lease crude and 30,000 lb. of sand.

The cement top outside the 5 1/2" casing is 3140 according to a cement top log.

The setting of a bridge plug does not constitute permanent abandonment of the lower perforations. Should conditions warrant at the time of permanent abandonment, the bridge plug must be drilled out and cement placed across all perforations.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
