Federal "T" Lease
 Well No. 15-13 is located 990 ft. from N line and 330 ft. from W line of sec. 13
S4/4N/4W/4 Sec. 13 18S 33E N.M.P.M.
 (1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
E.K. Mason Lea New Mexico
 (Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 3976 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

I plan to drill a 4350' Queen Sand test. Rotary tools will be used to approximately 1625', and cable tools from there to total depth.

8 5/8" casing will be set in the top of the anhydrite about 1625'. This is predicated on there being no surface water at this location. I will drill to 250', bail the hole dry, and check for any possible water. If water is found, will set 13 3/8" at 250' with 200 sacks before drilling ahead.

The 5 1/2" oil string will be cemented in the Queen Sand at approximately 4310', with 100 sacks.

All casing will be run and cemented using methods approved by the U. S. Geological Survey.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
