Well No. 9-14 is located 1980 ft. from N line and 1980 ft. from E line of sec. 14
N 14 Sec. 14 18-S 33-E N.M.P.M.
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
E-K Queen Lea New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

I propose to drill a 4350' Queen Sand test using combination tools.

I plan to drill with rotary to approximately 1600' and cement 3-5/8" casing in the top of the Anhydrite with 50 sacks.

The rest of the hole will be cut with cable tools.

The 5 1/2" oil string will be set in the Queen Sand above the pay at approximately 4280' with 100 sacks.

All casing will be run and cemented under procedures approved by the U. S. Geological Survey.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
