Well No. 9 is located 1980 ft. from $\begin{matrix} N \\ S \end{matrix}$ line and 1650 ft. from $\begin{matrix} E \\ W \end{matrix}$ line of sec. 24

$\begin{matrix} NE/4 \\ SE/4 \end{matrix}$ 24 $\begin{matrix} 18 S \\ 33 E \end{matrix}$ NAMPM
($\frac{1}{4}$ Sec. and Sec. No.) (Twp.) (Range) (Meridian)
E K Queen Lee New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 3932 ft. G.L.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill this well to an approximate total depth of 4625'. We will test the Penrose sand at total depth and as we go through the Queen sand, we will probably core 25' - 30' of this section. We will run approximately 300' of 8 5/8" casing & circulate to the surface. The amount of 5 1/2" casing will depend on which sand we complete the well. Enough cement will be used to properly cover the salt section.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
