(County or Subdivision)

New Mexico

(State or Territory)

The elevation of the derrick floor above sea level is **3916** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

The Queen Pay Zone from 4341-4350' has now been tested on the Pump. After all lead oil returned, the well was placed on production January 3, 1958. Since that date the production has been 80 bbls of total fluid per day. 90% oil and 10% water.

It is my intention to complete the well from the above interval. At some future date the plug at 4365' will be drilled out and the zone from 4366-4388 will be tested along with the presently producing zone.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
