Federal "T" Lease

Well No. 11-24 is located 2310 ft. from N line and 660 ft. from E line of sec. 24

NE 1/4 Sec. 24 18-S 33-E R.M.P.M.  
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)

E-K Queen Lea New Mexico  
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 3958 ft. (est.)

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

I propose to drill this well to a depth of 4410', using rotary to a depth of approximately 1700 feet, and cable tools from there to total depth.

13-3/8" surface casing will be set at 250' and cemented with 200 sacks, which will circulate to the surface.

An intermediate string of 8-5/8" casing will be cemented in the top of Anhydrite at approximately 1700' with 50 sacks.

A 5 1/2" oil production string will be cemented above the Queen pay sand at approximately 4385' with 100 sacks.

All casing will be run and set following practices approved by the U. S. Geological Survey.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
