Detailed account of work done, nature and quantity of materials used, and results obtained.

On 11-5-62, 7" OD 23-32#, N80 to P-110 casing was run and set at 14,172' with 700 ax cement. Top cement 11,350'. After WOC 18 hours tested casing with 2500 PSIG for 30 minutes with no loss in pressure. Drilled 6" hole from 14,172' to 14,507' and evaluated open hole after acidizing with 14,000 gallons acid. It is now proposed to drill to a depth of 15,000' to test the Fusselman Formation. If commercial production is obtained, liner will be run from 14,172' to total depth. New hole drilled to be adequately evaluated.
