Well No. 2 is located 1980 ft. from N line and 1980 ft. from E line of sec. 18  
NE/4 SW/4 18 18S 34E NMP1A  
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)  
CK Queen Lea New Mexico  
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is \_\_\_\_\_ ft.

## DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill this well to an approximate total depth of 4450' to test the Queen formation. We will run approximately 300' of 5 5/8" casing and circulate cement to the surface. We will run 5 1/2" casing to total depth and cement with 525 sac, 400 of which will be 4% Gel and 125 neat. This will be enough cement to cover the salt section without running a temperature survey. The hole will be drilled with rotary tools and we will probably core the sand section.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
