Federal "J" Lea
Well No. **2-142** is located **710** ft. from **SS** line and **560** ft. from **E** line of sec. **14**
SE/4SE/4 Sec. **14** **10S** **35E** **N.M.P.M.**
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Permian Devonian **Lea** **New Mexico**
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is **3683** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We plan to drill a 12,300' Devonian test.

We propose to set 13 3/8" surface casing at 350' with 350 sacks.

Intermediate casing will be 9 3/8" at approximately 3800' with 100 sacks of 50-50 Pennix.

The oil string will be 7" set on bottom with 300 sacks regular.

All casing will be run and cemented as to comply with all rules of the U. S. Geological Survey.

* Sufficient cement will be used to protect all of the salt section and any shallower pays encountered.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
