FULL DETAILS OF PROPOSED PLAN OF WORK

FOLLOW INSTRUCTIONS IN THE RULES AND REGULATIONS OF THE COMMISSION

This well is equipped with 3" tubing and water packer with less than 10 feet of pay section open above the packer. Increased water production has caused the well to cease flowing through the 3" tubing. Do not wish to pull tubing and disturb packer because water percentage will increase tremendously.

Therefore we plan to install one inch tubing and flow valves inside the 3 inch tubing and flow through the annulus between the two tubing strings. Outside gas from the bradenhead at well No. 2 located NE NE 24-18-37 on Graham State "A" lease will be injected into the one inch tubing.
