

Called JS in Santa Fe 5-17-89

Memo

From

JERRY SEXTON
District Supervisor

To Jerry

Bill Powers with Shell called 5/17/89 --

NHU #18-411 A-18-18-38 (Producer) has problem.

They cleaned out and SI for night next morning

found redbeds in hole. Set CIBP above perms 4224-4246

and ran casing inspection log. Found bad casing

370--1284 ft. Severe metal loss 400-484, 670-770',

830-902, 980-1020' -- Possible holes 805 & 854'

and for certain holes 452 and 677' where suspected

red beds came from.

Thinks casing is too bad to squeeze -- want to try to

back casing off about 300'.

He realizes the possibility that they may not be able

to get back in hole and may have to plug.

TOC is 2590'. Talked about setting a cement plug.

Paul picked bottom of Salado approx 2700'.
