REPORT OF THE COMMISSIONER OF PLANT INDUSTRY

The Commission of Plant Industry was organized on January 1, 1904, and since that time has been engaged in a study of the various problems connected with the development of the plant industry of the United States. The Commission has held numerous public hearings and has received many suggestions from the public. It has also conducted extensive researches into the various problems connected with the development of the plant industry. The results of its researches are set forth in this report.

The Commission has found that the most important problems connected with the development of the plant industry are: (1) the problem of the distribution of the plant industry; (2) the problem of the production of the plant industry; (3) the problem of the marketing of the plant industry; (4) the problem of the conservation of the plant industry; (5) the problem of the improvement of the plant industry.

The Commission has found that the most important problem connected with the development of the plant industry is the problem of the distribution of the plant industry. The Commission has found that the distribution of the plant industry is not uniform throughout the United States. It has found that the plant industry is concentrated in certain parts of the country, and that this concentration is due to a number of factors, including the availability of land, the availability of labor, and the availability of capital.

The Commission has found that the most important factor in the distribution of the plant industry is the availability of land. The Commission has found that the availability of land is not uniform throughout the United States. It has found that the availability of land is greatest in certain parts of the country, and that this is due to a number of factors, including the availability of water, the availability of labor, and the availability of capital.

The Commission has found that the most important factor in the production of the plant industry is the availability of labor. The Commission has found that the availability of labor is not uniform throughout the United States. It has found that the availability of labor is greatest in certain parts of the country, and that this is due to a number of factors, including the availability of land, the availability of capital, and the availability of water.

The Commission has found that the most important factor in the marketing of the plant industry is the availability of capital. The Commission has found that the availability of capital is not uniform throughout the United States. It has found that the availability of capital is greatest in certain parts of the country, and that this is due to a number of factors, including the availability of land, the availability of labor, and the availability of water.

The Commission has found that the most important factor in the conservation of the plant industry is the availability of water. The Commission has found that the availability of water is not uniform throughout the United States. It has found that the availability of water is greatest in certain parts of the country, and that this is due to a number of factors, including the availability of land, the availability of labor, and the availability of capital.

The Commission has found that the most important factor in the improvement of the plant industry is the availability of capital. The Commission has found that the availability of capital is not uniform throughout the United States. It has found that the availability of capital is greatest in certain parts of the country, and that this is due to a number of factors, including the availability of land, the availability of labor, and the availability of water.
