FULL DETAILS OF PROPOSED PLAN OF WORK

(FOLLOW INSTRUCTIONS IN THE RULES AND REGULATIONS)

Well was completed 4-5-57 at a TD of 3200' in the Bowers Sand a member of the Seven Rivers formation for IP of 270 BO in 18 hrs thru 2 1/2" choke on 2" tubing. GOR 526. Prod string of 5 1/2" casing set at TD with 14 1/2 sacks cement and perfs. at 3168-74, 3177-82, 3184-86. Currently production is one BOPD, GOR 843.

It has been established that the fresh water supply in the Northwest portion of the City of Hobbs, New Mexico is suffering pollution by invading gas from oil wells in this vicinity. Survey shows this well has communication existing between the production string and the intermediate string. Since abandonment is not desirable at this time it is proposed to squeeze off leaks with cement using packer to locate leaks.
