FULL DETAILS OF PROPOSED PLAN OF WORK

FOLLOW INSTRUCTIONS IN THE RULES AND REGULATIONS OF THE COMMISSION

This well went to 100% water around February 25, 1949. A packer was set at 3830' to shut off a possible casing leak, however the well still swabbed 100% water. We plan to deepen this well from present total depth of 4194' to 4234, in the third porosity zone. We will then set 340' of 5-1/2" OD liner at 4234, using approximately 50 sacks of cement. We will then perforate and test the upper part of the 2nd porosity zone. If water is still present we will squeeze off and then perforate and test the third zone.
