Oil Field, _____ County.

DETAILS OF PROPOSED PLAN OF WORK

This well will be killed by pumping oil into the tubing. It is then proposed to repair the producing White Lime Section by placing approximately 1000 Gallons of commercial Hydrochloric Acid Solution in the bottom of the hole. The well will then be shut in for about 72 hours before it is placed back on production.

It is recommended that this well be acid treated to prevent lease drainage by offset wells which has been acid treated.
